[Portfolio](#)

Summary

Technical Product & Operations Manager with 5+ years of experience building AI-powered products and workflows that streamline operations, improve decision making, and scale output without increasing resources. Proven track record of shipping data-driven and LLM-powered solutions from concept to launch, delivering measurable impact across efficiency, accuracy, and user engagement. Strong at translating complex problems into simple, high-impact products and using AI to accelerate both product development and go-to-market execution.

CORE SKILLS

Product & Strategy: Product Strategy, Roadmap, KPI Definition, A/B Testing, Data Pipelines, Stakeholder Management, User Insights, Product Analytics, API Design, B2B SaaS, 0 to 1 Innovation, UAT, QA

AI & LLMs: AI Product Development, LLM, Prompt Engineering, Predictive Modelling, ML/AI Systems, NLP, RAG

Tools & Methods: JIRA, Confluence, Tableau, Power BI, SQL, Python, Agile/Scrum, Salesforce

EDUCATION

University of Hull, United Kingdom
MSc Artificial Intelligence & Data Science (Distinction)

Babcock University, Nigeria
BSc Biochemistry

EXPERIENCE

Hopbyte LLC, Alpharetta, Georgia
AI Product Manager (Remote)

Mar 2024 – Feb 2026

Hopbyte operates across IT services, industrial supply, and energy sectors where operational data is complex, high-volume, and mission-critical. I led the development of a real-time fraud risk and anomaly detection product, defining product scope, success metrics, and roadmap across multiple business units. I identified and prioritized high-impact use cases across telemetry and transaction workflows, partnering with engineering to deliver scalable, real-time detection systems. The solution improved early-warning detection accuracy by 15% and reduced critical incidents by 20%, strengthening operational integrity and business continuity across Hopbyte's client base.

- Owned Growth squad roadmap end-to-end discovery through delivery reducing critical incidents 20% and improving detection accuracy 15%.
- Managed the AI use-case pipeline, identifying, prioritizing, and scoping high-impact fraud and anomaly detection initiatives across multiple business units
- Streamlined third-party integration and onboarding workflows, reducing setup friction and improving time-to-value for new partners
- Ran continuous discovery across 3 business units for customer conversations, opportunity mapping, and assumption testing to stay ahead of market needs.
- Audited end-to-end lending and compliance workflows to identify bottlenecks and inefficiencies, then prioritized and delivered automation solutions that improved processing speed and reduced manual intervention.

- Built Python/SQL-based monitoring dashboards to track workflow throughput, failure points, and processing time in real time.
- Led cross-functional stakeholder communication, presenting product performance, trade-offs, and roadmap updates to leadership.
- Shipped AI-powered features handling complex data flows, ensuring reliability across production environments
- Defined and tracked AI adoption and utilization metrics, including efficiency gains and user engagement, to measure product success.
- Acted as product interface with external partners, aligning API requirements and validating integration behavior
- Led AI governance and risk assessment to ensure reliable, compliant deployment of AI/ML systems across high-volume workflows.

Figg Africa, Lagos, Nigeria

Technical Product Manager (Remote)

Jan 2022 – Feb 2024

Figg Africa is a crowdfunding fintech connecting investors and partners across African financial markets. I led the development of AI-driven credit risk and engagement products, improving prediction accuracy by 18% and reducing default exposure by an estimated \$2M annually. I identified and prioritized high-impact use cases across lending and compliance workflows, partnering with engineering to deliver scalable data systems that supported product insights and decision-making. I also launched LLM-powered solutions that streamlined compliance processes, reducing manual review time by 40% and improving operational efficiency.

- Owned product execution for data-intensive systems, translating requirements into clear specs and acceptance criteria.
- Built business cases for AI-driven features on a B2B data platform, reducing investment risk exposure by \$2M and improving prediction accuracy 18%.
- Identified edge cases and system gaps early, preventing production issues in high-volume data workflows
- Identified and prioritized AI/ML use cases across lending and compliance workflows, aligning product development with business and regulatory needs.
- Developed product narratives and stakeholder-facing materials to communicate feature value, support adoption, and align cross-functional teams.
- Collaborated with Sales and Customer Success to translate market signals into product bets, aligning roadmap with revenue growth goals.
- Partnered with product, engineering, and compliance teams to translate user needs into scalable AI-powered solutions
- Coordinated testing and validation across environments, ensuring integrations worked reliably in real-world conditions
- Mapped and optimized a multi-step compliance workflow, identifying manual bottlenecks and building an LLM-powered tool that reduced review time by 40% and improved operational throughput.
- Led A/B testing and cohort analysis to validate product bets and guide roadmap prioritization using data, not intuition.
- Identified and championed high-impact AI use cases autonomously, building the backlog from zero based on market and user signals.

Bongalow, Lagos, Nigeria

Sept 2020 – Dec 2021

Data Scientist Intern (Remote)

Bongalow is a proptech company offering mortgage and home financing solutions across Nigeria. As a Data Scientist Intern, I supported the development of classification and regression models for mortgage risk assessment and property financial valuation, conducting exploratory data analysis on customer transaction and loan portfolio data to surface risk patterns and inform lending decisions.

- Conducted exploratory data analysis and statistical modeling to identify risk patterns in mortgage datasets.
- Built regression and classification models supporting lending and valuation decisions.
- Assisted in model validation, experiment analysis, and performance evaluation.
- Developed dashboards to communicate insights to stakeholder
